Friensys Info Labs

LinkedIn Profile, Launch Posts & AI/ML Go-to-Market Roadmap · Prepared 10 Nov 2026

1. LinkedIn Company Page — Friensys Info Labs (v3, AI/ML-first)
2. Friensys Info Labs — First 3 Posts + Founder Headline (v2, AI/ML-first)
3. Friensys Info Labs — AI/ML Go-to-Market Roadmap (90 days)

LinkedIn Company Page — Friensys Info Labs (v3, AI/ML-first)

Page: linkedin.com/company/friensysil · Website: https://friensys.com
Founder: Vikram (you). This page is Friensys-only; it does not reference any other company.
Target readers: owners/decision-makers in education, manufacturing, retail/distribution and other SMEs, plus startup founders who want AI built into their product.

Facts used (from friensys.com, read 10 Nov 2026):

- Positioning on site: "Software, Services & Staffing"
- Address: J-804, Sector-1, Techzone-IV, Greater Noida West, UP 201305 · info@friensys.com · +91-9971673592
- Services: Software Development · Cloud Solutions (AWS, Azure) · IT Consulting · Software Products · Staffing
- Own products: School ERP · Mobile App (student-parent-teacher) · CRM – Educational Management (admissions; lead capture from JustDial, Sulekha, Shiksha, CollegeDunia) · Escalation System (helpdesk/tickets) · OD-SAS (device/environment test monitoring: temperature, xenon-arc sunlight simulation) · Customer Loyalty · Marketplace (procurement of bought-out parts for manufacturers) · IoT smart attendance
- Client logos/case notes on site: Unique Educational Institute, VK Enterprise, VK Fashion
- Founder background (your resume): 20+ years; Microsoft India and Redington (Dubai) projects; LLM integration (OpenAI, Claude, Llama), Python/FastAPI, .NET, React, PostgreSQL, AWS/Azure

---

0. Fix before publishing (credibility risks found on friensys.com)

LinkedIn visitors will click through to the website. These items on the site could undermine trust if they are not literally true:

#	On the website	Action
1	Testimonials from "Amit Verma, Operations Head", "Neha Sharma, CTO" ("30% increase in efficiency"), "Rahul Das, Project Manager"	If these are template placeholders, remove them. Replace with real, named client quotes (with permission).
2	"Adopted by 25+ schools across multiple states"	Keep only if you can name/verify them. Otherwise state the true number.
3	"Recognized among India's top ed-tech innovators"	Keep only with the actual award/list name and year; otherwise remove.
4	"AI-driven personalized discounts" (Loyalty) and "AI Analytics"	Keep only if ML/AI actually runs in the product. Rule-based logic is not AI.
5	"Fully PCI-DSS compliant integration"	Accurate only if the payment gateway handles card data and you never store it. Reword to "payments via PCI-DSS compliant gateway" if so.

#	On the website	Action
6	Careers page: "Unlimited PTO", "99.9% uptime", "Annual allowance for courses"	Keep only if true policy.
7	AI/ML is almost absent from the site (only a job listing)	Add an "AI & ML Solutions" service page before pushing the AI positioning on LinkedIn; otherwise the two will not match.

Also confirm: industries listed on the site (Healthcare & Telemedicine, Fintech & Payments, Insurance, etc.) — keep only those with at least one delivered project.

3. Overview / About (≤2,000 characters)

Friensys Info Labs builds practical AI and machine-learning solutions that turn everyday business data into faster decisions and less manual work.

We combine our own ready-to-deploy products, including School ERP, Education CRM, Loyalty, Helpdesk and Procurement platforms, with custom AI development. Start with proven software, then add intelligence where it pays off.

CORE EXPERTISE
• AI Agents & Assistants (WhatsApp, web, internal teams)
• Generative AI & LLM Integration into existing software
• Document Intelligence: invoices, forms, POs, applications
• Knowledge Assistants (RAG) over your documents
• Predictive Analytics: lead scoring, demand, churn, dues
• AI-Powered ERP, CRM & Process Automation
• Smart Dashboards & Natural-Language Reporting
• IoT & Device Data Analytics
• Custom Software, SaaS & MVP Development
• Cloud & AI Consulting (AWS, Azure)
• Tech Staffing: AI, full-stack & cloud engineers

INDUSTRIES
• Education: AI admissions CRM, smart school ERP
• Manufacturing & Automobile: procurement, test data

• Retail, Trading & Distribution: loyalty, demand
• Electronics, Solar & Home Appliances
• Textile, Gems & Jewellery
• Logistics, Travel & Real Estate
• Startups & SaaS companies

TECHNOLOGY
AI/ML: OpenAI · Anthropic Claude · Llama · LangChain · RAG · Vector Search · scikit-learn · PyTorch
Backend: Python (FastAPI) · Node.js · .NET
Frontend & Mobile: React · Next.js · React Native
Data: PostgreSQL · SQL Server · MongoDB · Redis
Cloud & DevOps: AWS · Azure · Docker · Terraform · CI/CD

WHY FRIENSYS
✓ Founder-led by a software architect with 20+ years of enterprise delivery
✓ Our own products, used by real institutions and businesses
✓ AI pilots with fixed scope, measured against a business KPI
✓ Secure by design: your data stays yours

Have a process, document pile or dataset slowing your team down? Let's find where AI can help.

---

5. Specialties (max 20)

Artificial Intelligence · Machine Learning · Generative AI · AI Agents · LLM Integration · AI Chatbots · Document AI · Predictive Analytics · RAG · AI Automation · School ERP · Education CRM · Customer Loyalty Software · Procurement Software · IoT Solutions · Custom Software Development · SaaS Development · Cloud Solutions · IT Consulting · IT Staffing

---

6. Showcase the products (LinkedIn "Products" tab)

Add each live product as a LinkedIn Product page; they appear in product searches and on the company page. Lead each one with its AI angle only where the AI feature actually exists; otherwise list it under "AI roadmap" in posts, not as a current feature.

Product	One-line description	AI upgrade to build next
School ERP + Mobile App	Admissions, fees, exams, attendance, homework and parent communication in one platform	AI report-card remarks; fee-default early warning; parent query assistant
Education CRM	Admissions CRM capturing leads from JustDial, Sulekha, Shiksha, CollegeDunia and your website	ML lead scoring (replacing manual Hot/Warm/Cold); AI counsellor follow-up drafts
Escalation System	Multi-level ticket routing with SLA tracking	AI ticket classification, priority prediction, suggested replies
Customer Loyalty	Points, tiers, coupons and campaigns with analytics	Churn prediction; personalised offers based on purchase behaviour
Marketplace (Procurement)	Procurement of bought-out parts for manufacturers	AI quote comparison; PO/invoice document extraction; demand forecasting
OD-SAS	Monitoring of device behaviour under controlled environmental test conditions	Anomaly detection on test runs; automated test-report summaries

---

7. Make the page credible

- Logo 300×300 + banner above.
- Set "Founder, Friensys Info Labs" as your current role so you appear under People; ask employees to link Friensys too.
- Post a real case study from Unique Educational Institute, VK Enterprise or VK Fashion (with their permission and real numbers).
- Invite your connections in education and manufacturing to follow the page.

Friensys Info Labs — First 3 Posts + Founder Headline (v2, AI/ML-first)

Target readers: school/college owners and admissions heads, manufacturing SME owners, startup founders. Companion to LinkedIn_Company_Profile_Friensys.md. Friensys-only; no other company referenced.

Rule for every post: describe an AI feature as available only if it runs in a real build. Otherwise say "we are building" or "we can build".
Posting order: Post 1 (pin) → Post 2 after 2–3 days → Post 3 after another 2–3 days. Post from the company page, then reshare from your profile with one personal line.

Post 1 — Pinned introduction

AI is not just for big tech companies.

A school admissions team, a parts manufacturer or a distributor already has the data AI needs: enquiries, invoices, purchase orders, test reports, customer history.

What they usually don't have is someone to turn that data into something useful.

That is what we do at Friensys Info Labs.

🤖 AI agents that answer customer and parent queries on WhatsApp and web
📄 Document AI that reads invoices, POs and application forms
📈 Predictive analytics: which leads will convert, which dues will be late, which customers may leave
📊 Dashboards you can ask questions in plain English

We also build and run our own products: School ERP, Education CRM, Loyalty, Helpdesk and Procurement platforms. So we add AI to software that real businesses already depend on.

How we start:
→ One business problem, one AI pilot
→ Fixed scope, measured against a real KPI
→ Scale only after you see the result

Which task in your business would you hand to AI first? Tell us in the comments.

#ArtificialIntelligence #MachineLearning #GenerativeAI #AIforBusiness #EdTech #Manufacturing #GreaterNoida

[Image: banner "AI that works inside your business". No invented metrics.]

Post 2 — Education (admissions)

Admission season is a race. Here is where AI helps your team win it 👇

Most institutions get enquiries from JustDial, Sulekha, Shiksha, CollegeDunia, the website and walk-ins. The problem is not getting leads. It is following up on the right ones in time.

1️⃣ Lead scoring
AI ranks every enquiry by its likelihood of enrolling, so counsellors call the serious ones first.

2️⃣ Instant replies, 24×7
An AI assistant answers fee, course and eligibility questions on WhatsApp, then hands over to a counsellor.

3️⃣ Follow-up drafts
Personalised follow-up messages written for each counsellor to review and send.

4️⃣ Source analytics
See which lead source actually brings admissions, not just enquiries, before you spend next year's budget.

5️⃣ Parent communication after admission
Fee reminders, attendance alerts and exam updates through the parent app.

Our Education CRM and School ERP already handle the enquiry-to-enrolment workflow. **[CONFIRM: list only the AI features that are live; label the rest "coming next"]**

Which step loses you the most admissions? Comment below.

#EdTech #SchoolManagement #Admissions #AIinEducation #EducationCRM

Data note: student data is personal data under India's DPDP Act. Mention consent and data protection if you show any screens.

Post 3 — Manufacturing

Where does AI actually help a manufacturing SME? Not robots. Paperwork and data.

⚙️ Purchase orders and supplier invoices
Document AI reads POs, quotations and invoices and flags mismatches in price, quantity or terms before payment.

⚙️ Supplier quotes
Compare quotes for bought-out parts side by side automatically, not in an Excel sheet built by hand.

⚙️ Test and quality data
Machine learning spots unusual patterns in test runs early, so engineers investigate before a batch fails.

⚙️ Demand and inventory
Forecasts based on your own order history help you buy parts when you need them, not too early or too late.

We built a procurement marketplace for bought-out parts and OD-SAS, a test-monitoring system for devices under controlled environmental conditions. AI is the next step on top of that data.

If your team spends hours matching documents or reading test logs, let's talk.

#Manufacturing #AIinManufacturing #Procurement #MachineLearning #IndustrialAI #MSME

Founder headline (LinkedIn limit: 220 characters)

Founder, Friensys Info Labs | Applied AI & ML for Education, Manufacturing & SMEs | AI Agents · LLMs · Smart ERP/CRM | Software Architect · 20+ Yrs

Founder Experience entry

Title: Founder
Company: Friensys Info Labs (link to the company page)
Dates: **[CONFIRM start]** – Present
Location: Greater Noida West, Uttar Pradesh, India

Description:
I founded Friensys Info Labs to help institutions and growing businesses use AI and machine learning in their everyday operations.

• Lead product strategy and architecture for our own platforms: School ERP, Education CRM, Escalation System, Customer Loyalty, Procurement Marketplace and OD-SAS
• Design AI solutions: LLM agents and assistants, document intelligence, RAG knowledge assistants and predictive analytics
• Lead client delivery, cloud architecture (AWS, Azure) and tech staffing engagements

Skills to attach: Artificial Intelligence · Machine Learning · Generative AI · Software Architecture · Entrepreneurship

Founder About (personal profile, opening paragraph)

I'm the founder of Friensys Info Labs, where we build applied AI and ML solutions for education, manufacturing and growing businesses. Over 20+ years in software, I have delivered enterprise systems including web applications for Microsoft India and Redington (Dubai), and today I focus on putting AI to work inside the software businesses already rely on: admissions, procurement, customer loyalty, support and operations.

Friensys Info Labs — AI/ML Go-to-Market Roadmap (90 days)

Audience: Vikram (founder). Friensys-only.
Based on friensys.com (read 10 Nov 2026) and your resume. Items marked **[CONFIRM]** need your input.

---

1. Positioning

"AI that works inside your business." Friensys adds AI to operational software that institutions and SMEs already depend on, starting with our own products.

Why this beats being a generic "AI company":

- Generic AI agencies are a crowded, price-driven market. You already own something most of them don't: **products with real users and data flows** (School ERP, Education CRM, Loyalty, Escalation, Procurement Marketplace, OD-SAS).
- AI is far easier to sell as a feature of software the client already uses (an upsell) than as a standalone project to a stranger.
- Non-tech buyers don't buy "LLMs". They buy more admissions, fewer late fees, faster procurement and fewer failed batches.

Focus order (do not chase every industry on the website):

1. **Education (primary):** strongest assets (ERP + CRM + mobile app, existing school clients such as Unique Educational Institute).
2. **Manufacturing SMEs (secondary):** Marketplace + OD-SAS, VK Enterprise, and a large local industrial base in Noida/Greater Noida.
3. **Startups (opportunistic):** AI MVPs and AI-engineer staffing. Take these when they come; don't build the main pipeline around them yet.

---

2. Phase 0: Fix the foundation (weeks 1–2)

Do this before outreach. Prospects will check the website.

1. **Clean unverifiable website claims:** placeholder testimonials, "25+ schools", "national recognition", "AI-driven" features that are rule-based, PCI-DSS wording, careers perks. See section 0 of LinkedIn_Company_Profile_Friensys.md.
2. **Add an "AI & ML Solutions" page to friensys.com**, mirroring the LinkedIn core expertise, with one section per industry.
3. **Publish the LinkedIn page v3** plus the founder headline and experience entry.
4. **Register on Udyam (MSME)** and shortlist the associations in section 7.
5. **Decide your delivery capacity honestly.** Your hands-on strength is LLM applications (agents, RAG, document AI) plus production backends. Classical ML at scale (forecasting, anomaly detection, PyTorch models) needs an ML engineer on the team or on contract. The website already advertises an AI/ML Engineer role, so fill it before selling ML-heavy projects.

3. Phase 1: Build 2 demoable AI features (days 1–30)

A working demo on your own product sells better than any slide. Build:

Feature	Product	Why first
AI admissions assistant + lead scoring	Education CRM	Admission season creates urgency. Value is easy to measure (enquiry-to-admission rate). LLM-based, which matches your strengths.
Document AI for POs/invoices/quotes	Procurement Marketplace	Every manufacturer has this pain. LLM extraction + validation matches your strengths. Easy to demo with sample documents.

Rules:

- Use test or consented data in demos. Never use real student or parent data without permission.
- A human approves anything that is sent to customers or affects money.
- Track LLM cost per transaction from day one, so you can price the add-on profitably.

---

4. Phase 2: Sell (days 30–60)

A. Existing customers first (fastest revenue)

- Offer current School ERP/CRM and Marketplace clients a **paid AI pilot** on their own data at a pilot price, in return for a case study and testimonial.
- Target: 2 pilots, 1 in education and 1 in manufacturing.

B. Education channels

- School and college owners, principals and admission heads through LinkedIn plus WhatsApp follow-up.
- Education expos, school association meetings and principals' groups in Delhi NCR **[CONFIRM which you can access]** .
- Coaching institutes: shorter sales cycles than schools, and enquiry-heavy.
- Timing: pitch admissions AI **before** the admission cycle starts, not during it.

C. Manufacturing channels

- Industrial associations and trade events in Noida/Greater Noida industrial areas **[CONFIRM names]** .
- Introductions through VK Enterprise and other existing clients.
- Lead with the free **"AI Opportunity Audit"** (one visit, one written report) rather than a demo.

D. Startups

- AI MVP packages and **AI/full-stack engineer staffing** (already a service on the website).
- Channels: LinkedIn founder outreach, incubators and startup events in NCR, Upwork for fixed-price AI integration jobs.

Packages to offer

Package	Buyer	Deliverable
AI Opportunity Audit	Any SME / institution	1–2 sessions; written report: top 3 AI use cases, expected impact, cost, data needed
AI Pilot (4–6 weeks)	Existing or new client	One AI feature live on their data, with a before/after KPI
AI Add-on subscription	ERP/CRM/Marketplace users	Monthly fee per institution or user for AI features
AI MVP	Startup founders	Launch-ready product with LLM features, built to production standards
AI Engineer Staffing	Startups / IT companies	Vetted AI, full-stack and cloud engineers

Prices: **[CONFIRM]**. Price the subscription above your measured LLM cost plus support.

---

5. Phase 3: Content and proof (from day 30, ongoing)

- **3 posts a week:** 1 education, 1 manufacturing, 1 founder insight (lessons from building AI in production). Post drafts are in LinkedIn_Friensys_Posts_and_Headline.md.
- **Short demo videos** (60–90 sec) of the two Phase 1 features.
- **First case study** as soon as a pilot shows a measured result: problem → AI solution → KPI before/after → client quote.
- Your founder profile does most of the reach; the company page holds the proof.

---

6. Phase 4: Productise and scale (days 60–90)

- Turn pilot features into standard AI add-ons inside each product, with a price list.
- Add the next AI features from the product table in LinkedIn_Company_Profile_Friensys.md, section 6, ranked by what pilots asked for.
- Move from project fees to **recurring AI subscriptions**. This is where Friensys builds enterprise value.

---

7. Communities, associations & registrations

LinkedIn groups are joined by people, not company pages. You join and post as the founder, and send readers to the Friensys page. (Whether LinkedIn now lets company pages take part in groups is not verified here.) Offline associations usually bring more leads than LinkedIn groups.

A. LinkedIn groups (founder profile)

Join groups where buyers gather, not other vendors. Search terms:

Focus	Search terms
Education	"school principals India", "school leaders", "education management India", "EdTech India", "admissions counsellors"

Focus	Search terms
Manufacturing	"MSME India", "Indian manufacturing", "auto component manufacturers", "procurement professionals India", "supply chain India"
Local business	"Noida entrepreneurs", "Greater Noida business", "Delhi NCR SME"
Startups	"Indian startup founders", "SaaS founders India"
AI credibility	1–2 "Generative AI India" / "AI in business" groups

- Choose groups with posts from the current week and members who are owners, principals or procurement heads. Join 8–10 and skip inactive ones.
- Comment helpfully 3–4 times a week before posting anything of your own.
- Share advice-style versions of the Friensys posts. No sales pitches or DM blasts.
- Connect with members who engage, then message them one to one.

B. Industry associations (verify eligibility, fees and how active the local chapter is before joining)

Segment	Organisations	Value
Education	FICCI ARISE (Alliance for Re-Imagining School Education); NISA (National Independent Schools Alliance); local private-school associations in Gautam Buddh Nagar / Ghaziabad **[CONFIRM: ask Unique Educational Institute which one they belong to]**; education expos and principals' conferences in Delhi NCR	Direct access to school owners and principals; speaking and exhibiting slots
Manufacturing & SMEs	Noida Entrepreneurs Association (NEA); Greater Noida industrial-area associations **[CONFIRM names]**; CII / PHDCCI / FICCI MSME or UP chapters; sector associations (auto components, electronics) via VK Enterprise	Local factory owners; credibility; events
IT & startups	NASSCOM membership; Startup India (DPIIT recognition), if eligible	Credibility; AI and startup programmes; incubator and scheme access

C. Registrations

- **Udyam (MSME) registration:** many buyers and government schemes prefer MSME vendors. Do this in Phase 0.
- **GeM seller registration:** for government schools, universities and public-sector buyers. The sales cycle is long, so treat it as a Phase 4 option.

90-day target: 8–10 active LinkedIn groups, 1 education association, 1 local industry association (NEA or Greater Noida), Udyam registration done, and at least **one speaking slot or workshop** through an association (e.g. "AI for school admissions" to principals). One 20-minute talk to a room of buyers usually beats months of group posting.

---

8. Weekly operating rhythm

- 20 targeted outreach messages (10 education, 10 manufacturing)
- 2 discovery calls or audits
- 3 LinkedIn posts + reshares from your profile
- 3–4 helpful comments in LinkedIn groups
- 1 event, expo or association meeting per fortnight
- Track weekly: conversations, audits done, pilots proposed, pilots won, lead source

---

9. Risks to manage

Risk	Mitigation
Data protection (DPDP Act, 2023): schools handle children's data; Indian law requires verifiable parental consent for processing children's personal data	Get legal review of consent flows and data processing agreements before AI processes student data. [Unverified here: the exact obligations and timelines under the DPDP Rules; confirm with counsel.]
AI errors (wrong extraction, wrong answer)	Human review on money, admissions decisions and customer-facing replies; log AI outputs for audit
LLM cost eating the margin	Measure cost per transaction in pilots; cache and choose model size by task
Over-claiming AI	Call a feature AI only if it is; publish only measured results
Thin ML capacity	Hire or contract an ML engineer before selling forecasting or anomaly-detection projects
Spreading across 15 industries	Keep education and manufacturing as the 90-day focus
